GENERAL INFORMATION

M2160000100038

The electronic device is basically the same as that in the conventional 4G1 engine.
The employed alternator is a lightweight type in which the electronic voltage regulator for detecting the battery voltage is built.
The employed starter motor is a small planetary gear reduction drive type.
The employed spark plug is a long reach type with iridium.
The employed ignition coil is a plug top type in which the powertrain per cylinder is built.
